MPQ60-48S24W Derating Curve With Heat-sink

MPQ60-48S24W Efficiency vs. Input Voltage

MPQ60-48S24W Efficiency vs. Output Load

FUSE CONSIDERATION

This power module is not internally fused. An input line fuse must always be used.

This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of sophisticated power architecture.

To maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse.

The input line fuse suggest as below :

Model	Fuse Rating (A)	Fuse Type
MPQ60-24□□□W	10	Fast-Acting
MPQ60-48□□□W	6.3	Slow-Blow

The table based on the information provided in this data sheet on inrush energy and maximum DC input current at low Vin.

RECOMMENDED PAD LAYOUT

- All dimensions in inch[mm]
- Pad size(lead free recommended)
- Through hole 1.2.3.5.6.7: $\phi 0.051$ [1.30]
- Through hole 4.8: $\phi 0.075$ [1.90]
- Top view pad 1.2.3.5.6.7: $\phi 0.064$ [1.63]
- Top view pad 4.8: $\phi 0.094$ [2.38]
- Bottom view pad 1.2.3.5.6.7: $\phi 0.102$ [2.60]
- Bottom view pad 4.8: $\phi 0.150$ [3.80]

THERMAL CONSIDERATIONS

The power module operates in a variety of thermal environments.

However, sufficient cooling should be provided to help ensure reliable operation of the unit.

Heat is removed by conduction, convection, and radiation to the surrounding Environment.

Proper cooling can be verified by measuring the point as the figure below.

The temperature at this location should not exceed "Maximum case temperature".

When Operating, adequate cooling must be provided to maintain the test point temperature at or below "Maximum case temperature".

You can limit this Temperature to a lower value for extremely high reliability.

- Thermal test condition with vertical direction by natural convection (20LFM).

ASSEMBLY INSTRUCTION

1. All dimensions in inch [mm]
2. Tolerance :x.xx±0.02 [x.x±0.5]

OUTPUT VOLTAGE ADJUSTMENT

It allows the user to increase or decrease the output voltage of the module.

This is accomplished by connecting an external resistor between the Trim pin and either the +Sense or -Sense pins.

With an external resistor between the Trim and -Sense pin, the output voltage increases.

With an external resistor between the Trim and +Sense pin, the output voltage decreases.

The external Trim resistor needs to be at least 1/8W of rated power.

EXTERNAL OUTPUT TRIMMING

Output can be externally trimmed by using the method shown below.

Trim-up
